Island Filter Hood FN-DB-MP60

Double Box Canopy Single Row Appliance with Makeup Air

General Description

The island filter hood is used on single row island cooking equipment. The hood is ceiling hung with a recommended mounting height of 6'6" (1981 mm) from the finished floor. The hood has a full length "V" bank filter arrangement centered in the canopy width. The baffle filters on each side of the "V" can be sized for unequal exhaust air volumes. The hood is finished in a No. 4 stainless steel finish on all exposed sides. The double box canopy can be tapered to 12" (305 mm) at the front. The filter hood is available with fluorescent or incandescent lights.

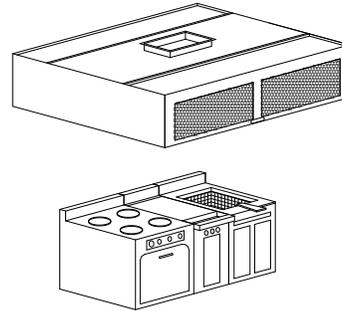

The heated makeup air is discharged through perforated panels located on the front of the hood.

Efficiency

The hood is equipped with high efficiency UL/ULC listed baffle grease filters. The exhaust air accelerates through multiple turns within the baffle filter. Centrifugal forces causes grease dirt and lint to deposit on the baffles. The liquefied grease drains down the baffles, along the grease trough, and into a grease cup.

Exhaust and Supply

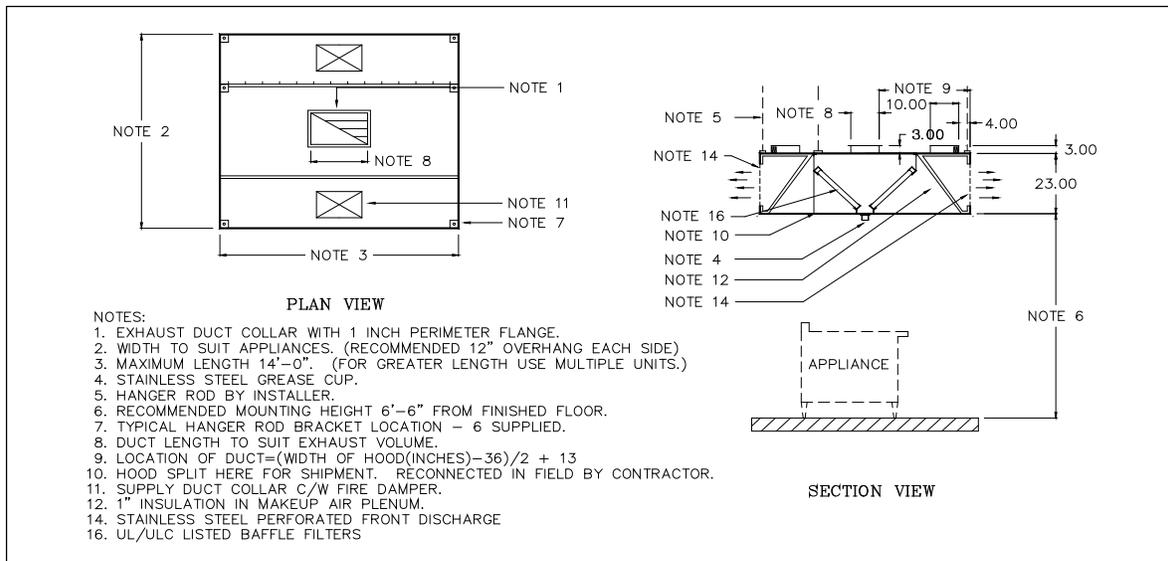

The total exhaust required to properly ventilate a commercial kitchen is directly related to the type of cooking equipment under the ventilator. An exhaust

flow rate between 300 and 700 CFM/ft (465 and 1085 l/s/m) is required for most hoods. Heated fresh air is discharged out the front of the hood canopy for MP and MG types. Fresh air volume of 80% of the total exhaust is recommended for heated makeup air systems. Refer to the *Ventilator Engineering Manual* for supply air volume calculations.

Unheated fresh air volume between 50 and 80% of the total exhaust is recommended for compensating makeup "MI" air systems. For detailed calculations refer to the *Spring Air Systems Compensating Hood Engineering Manual*.

Model FN-DB-MP60

Engineering Data

Ventilator Length (ft)	Typical Exhaust and Supply Air Flow Rate for Heated Makeup Air MG & MP types (EFR*)				Typical Exhaust and Supply Air Flow Rate for Unheated Makeup Air MI types (EFR*)

14.0	7000	16 x 39.5	5600	8 @ 10 x 12	8400	2 @ 10 x 37	5880	8 @ 10 x 13

*For flow Rates not shown above refer to the *Ventilator Engineering Manual* for Exhaust and Supply Volumes for MG and MP hoods and the *Compensating Engineering Manual* for Exhaust and Supply Volumes for MI hoods.

Exhaust Flow Rate CFM/ft	Exhaust Static Pressure (in W.C.)
400	0.35
500	0.45
600	0.66
Supply Air Rate	Supply static Pressure ("W.C.)
MG & MP	0.20
MI	0.45

Notes:

- Exhaust duct can be located anywhere along length of the filter hood.
- For lengths greater than 14' (4270 mm) join multiple sections together.

Spring Air Systems Model No. FN-DB-MP60 Hood Specification

The filter hood shall be a Spring Air Systems model no. FN-DB-MP60, double box canopy for single row cooking, high efficiency, filter hood, with make up air plenum, UL/ULC listed, and built in accordance with the NFPA-96. The unit casing shall be a minimum 18 GA. Stainless steel with all exposed sides no. 4 finish. The filter hood shall include UL/ULC listed baffle grease filters mounted in an integral stainless steel rack inclined at 45 degrees. The filter rack shall include a full length stainless steel grease gutter and grease cup.

The heated makeup air discharges through stainless steel perforated panels located on the front of the hood.

The unit casing shall be a minimum 18 GA. stainless steel on all exposed surfaces. The make up air plenum shall be insulated with 1" attenuating foam. The supply duct collars shall each have a fire damper with a 165°F fusible link. The MI makeup air supply duct collars shall have a balancing damper with locking quadrant. The sheet metal contractor shall supply an access door on the duct above the damper for inspection. The hood shall have incandescent/fluorescent lights evenly spaced along the length of the hood.
